Approved For Release 2000/08/28 : CIA-RDP78-03942A000100010005-8

8 November 1963

MEMORANDUM FOR: Assistant Director, Computer Services

SUBJECT : Explanation for the Increase in 7090
Utilization in October

There was a significant increase of time on the 7090 in October. Total time (Test and Production) was more than twice as much as in September (170 hours as compared to 83).

The increase in test time was 33 hours which resulted from 30 hours of programmer training and a 5 hour increase in the time charged to utility runs. These are small jobs that are batched together to save setup time and are not charged to specific job numbers.

Some part of your motivation may have been workload for ~~SECRET~~
~~SECRET~~ the 7090. [REDACTED] has just given me the following
startling figures:

7090 Utilization for Oct 63

OSA	39.7 hours	} <u>Test + Production</u>
OSI	31.0 hours	
Other	<u>99.3 hours</u>	
	170.0 hours	(Virtually one full shift!) (3rd month after delivery)

A major element in "other" time is debugging ~~and running~~ training programs...that is, practice programs for our Programmers.

A major element in "OSI" time is NSA's work with us running [REDACTED]
